

# IKM – JH

## JET HOODS

### DESCRIPTION

Jet hoods are expelling air vertically rather than laterally - as is common with most roof terminations. Using a jet hood often means a vertical duct can be shorter than it would otherwise need to be with a standard hood. Accumulated water is drained from the systems via a drain pipe.

Material:  
AISI 316L (1,4404 / 1,4401)
