

Technical datasheet

Coolsafe M331

Item number 12011

Introduction

Coolsafe M331 is a ready to use inhibited ethylene glycol solution to be employed in recirculating, closed systems working with cold or chilled water.

The unique blend of corrosion inhibitors has been formulated to ensure an excellent level of corrosion protection in particular for aluminum alloys.

Coolsafe M331 is compatible with all non-metallic components of the system like plastic and rubber materials.

Minimum order size: 48 cans of 25 ltr.

Features

- Ready-to-use chemical
- Anti-freeze properties until -15°C
- Corrosion protects multi-metal systems
- Resistant at hard water ingress

Safety features

- The product is not classified according to the CLP registration.
- Very effective in protecting aluminum alloys against corrosion

Capacity & performance

Type of fluid:	Cooling water
Packaging, jerricans:	25 ltr.
pH-value:	7,9-8,1
Freezing point:	$<-15^{\circ}\text{C}$

Weight & dimensions

Length	
Width	
Height	
Density (20°C):	1,03 g/ml
